

Super LASIK, Super Surgeon

Currently, Lasik is one of the most popular procedures in vision correction. Over 5 million patients worldwide have had the procedure. We, here in Westlake Village, are fortunate to

have world-class Surgeon, Rajesh Khanna MD, near. He has the only FDA- approved laser, which can do wavefront treatments on nearsightedness, farsightedness and astigmatism. He has also introduced to the Conejo Valley small devices called "smart

plugs" for those patients with dry eyes to preserve natural tears. He performs other procedures as well, such as: advanced surface ablation, multi focal lens and refractive lens exchange and refractive cataract surgery. His satisfaction comes from knowing that his patients are completely safe and never in any pain. When he speaks, it is with total confidence and enthusiasm

because he knows his patients are pleased with their outcome.

Things are moving forward and new and advanced procedures are being developed for those who originally could not receive the standard Lasik procedure. Dr. Khanna has introduced a brand new procedure called "Super Lasik", a new, safer and more stable procedure that has now been created for those who have thin or abnormal corneas. What is great about this new procedure is that the effects are more precise and long term. To accomplish this cutting-edge surgery, Dr Khanna uses a new FDA- approved instrument.

Anyone over the age of eighteen can benefit from corrective vision surgery. The investment pays for itself. Patients leave with a new completeness and clarity with life because really, how we see things affects our total outlook on life. People leave feeling rejuvenated and young, and in reality, who wouldn't want that?
